5. Review and Approval Procedure

Complete the following review and approval process before technical documentation is released.

1. Prepare the Document

The Technical Writer completes the draft, confirms that mandatory sections are included, and verifies that the document is complete and ready for review.

The SME evaluates the document for technical accuracy, completeness, system behavior, and technical requirements. The SME records required corrections or provides feedback to the Technical Writer.

6. Prepare for Release

The Technical Writer prepares the approved version for release and verifies that the document contains the correct title, version number, approval status, and other required document-control information.
